For Loop in Java

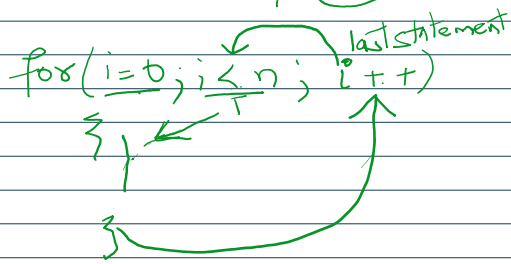

21 June 2025 09:39

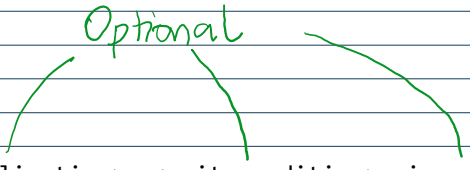

People call for loop as counting loop. It is used when we know number of iteration or rotation.
The Syntax of the for loop is:

```
for(<initialization>; <exit condition>; increment/decrement){
   //Code which is going to be repeated 'N' number of times.
}
```

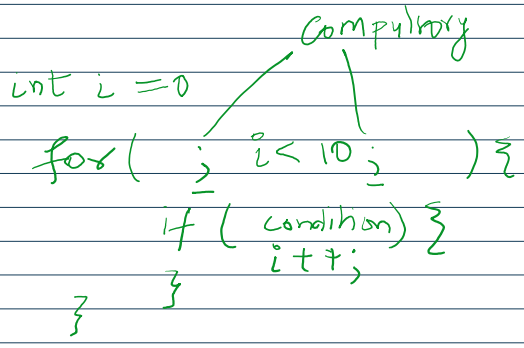

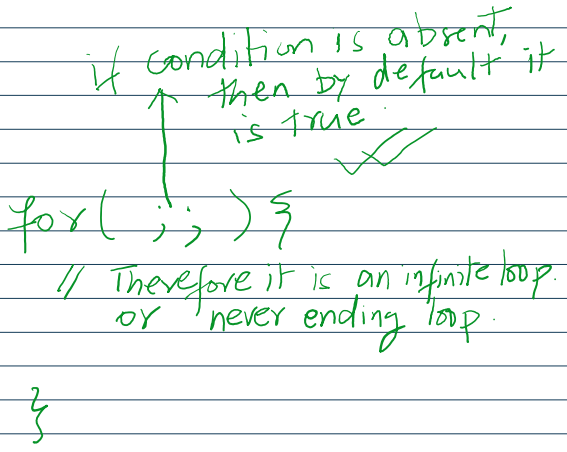

```
for(<initialization>; <exit condition>; increment/decrement){

   //Code which is going to be repeated 'N' number of times.

}
```

Home work:
Q1.(h, i, j, k)
Q2
