Introduction to Java using BlueJ IDE

31 March 2025 12:03

Introduction to BlueJ IDE

Menu bar

class or package bench.

code pad (it uses Java shell)

it is a command line interpretor.

Text box (where we write our commands)

Object bench

JVM indicator

reset JVM button (use to stop execution of code forcefully)

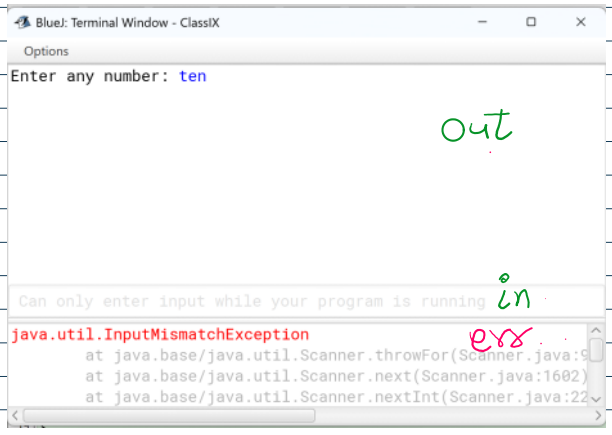

Terminal Window:

System → out, in, err (output)

out

in

out

in

err

BLUEJ is an IDE(Integrated Development Environment)

* Eclipse
* IntelliJ

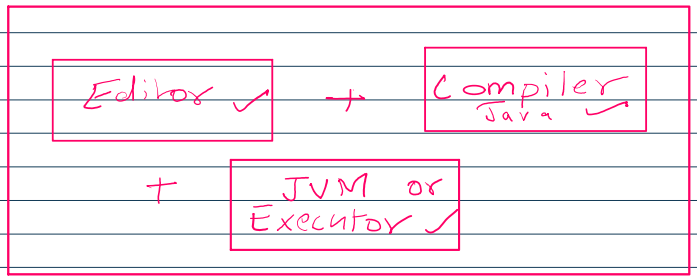

} IDEs

BLUEJ is an IDE(Integrated Development Environment)

* Eclipse
* IntelliJ
* Netbean

} IDE's

and soon

IDE

when a software contain editor, compiler/Interpretor and execution environment, it is called IDE.

What is Java?

Java is a high level object oriented programming language.

History of Java

Who is Father of Java?
James Gosling and the other persons are Patrick Naughton, Mike Sheridan and project name is Green.

- **1990 : The Green Project**
- **Sun Microsystems, led by *James Gosling, Mike Sheridan, and Patrick Naughton* initiated the "Green Project" to explore the possibilities of consumer electronics and digital devices.**
- **The aim was to create a language for programming home appliances like TVs, VCRs, and other electronic devices.**
- **The team initially considered using C++, but they found it too complex and unsuitable for embedded systems. This led them to create a new language that was simple, platform-independent, and secure.**

1991 : Birth Of Oak
- **James Gosling began work on a new language called "Oak," named after an oak tree outside his office.**
- **Oak was designed to be simple, secure, and platform-independent, focusing on portability and reliability for embedded systems.**
- **The Green Project team created a device called *"Star7"*, an interactive, handheld home-entertainment controller, to showcase Oak's capabilities, but it failed to gain traction in the consumer electronics market.**

- **1992 : The Green Project's First Success**
- **The Green Project team developed the "Star7," a handheld device controller with a graphical user interface that demonstrated Oak's capabilities.**
- **However, the project faced challenges due to the slow adoption of digital consumer electronics, leading the team to shift focus.**

- **1993 : Shift to the Internet**
- **The team realized that the growing World Wide Web presented a new opportunity for Oak's platform independence.**
- **They started adapting Oak for web-based applications, aiming to create interactive and dynamic web content.**

1994: Oak Becomes Java

- Oak was renamed Java, after the team decided that "Oak" was already trademarked. The name "Java" was chosen after a brainstorming session where the team discussed many names, ultimately settling on one inspired by Java coffee.
- The team created the first Java-enabled web browser, "WebRunner," later renamed "HotJava."

1995 : Official Release of Java 1.0

- Sun Microsystems officially announced ***Java 1.0 on May 23, 1995, at the SunWorld conference***.
- The "Write Once, Run Anywhere" (WORA) capability became a core feature, allowing Java programs to run on any device with a Java Virtual Machine (JVM).
- The release included key components like the Java Development Kit (JDK), the HotJava browser , and the Java Runtime Environment (JRE).

1995 : Netscape Integrates Java

- Netscape Navigator is first web browsers to integrate Java, which leading a web browser at the time, significantly boosting Java's visibility and adoption.
- Java applets (small Java applications that run in a web browser) gained popularity for creating interactive web content.
- Java allowing developers to create dynamic and interactive web content using applets.

Latest Java version is : JDK 24 is the latest release of the Java SE Platform.

Features of Java

1. Simple
2. Object-oriented
3. Portable
4. Platform Independent
5. Secured
6. Robust
7. Architecture neutral
8. Interpreted
9. High Performance
10. Multithreaded
11. Distributed
12. Dynamic
